Election/Restrictions

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows: Species I as shown by fig 2; and species II as shown by fig 5.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner: claims 4-6, 13 and 18 read on species I; claims 7-12 read on species II and claims 1-3, 14-17 and 19 are generic.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

DE 3727633 discloses the common technical features of claims 1-3, 14-16 and 19.

The common technical features of claim 17 are shown by DE 3727633 in view of WO 01/53724. DE 3727633 discloses an automatic transmission having first (from 5) and second (from 4) pump flows as being from pumps having different flows (e.g. fig 4), but does not disclose that the at least one of the pumps is a vane pump or an internal gear pump. WO 01/53724 teaches that a dual pump for an automatic

Art Unit: 3745

transmission can be an internal gear pump. Therefore, it would have been obvious to one of ordinary skill in the multiple pump art to make the pumps of DE 3727633 internal gear pumps, as taught by WO 01/53724, as a matter of engineering expediency.

All other technical features claimed are not common to both species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

A telephone call to Alfred Mangels on December 13, 2006, requested an oral election, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
